SKILLS

Languages

JavaScript · TypeScript · Go · Bash

Full-Stack Development

Node.js · React.js · Next.js · Adonis.js ·
Express.js · Vue.js · HTML5 · CSS3 ·
WebSockets · SSE · GraphQL · Kafka

Databases, Caching & Search

PostgreSQL · MongoDB · DynamoDB ·
Elasticsearch · Redis

DevOps & Infrastructure

Docker · Kubernetes · Terraform ·
Nginx · Linux · SSL · Cloudflare ·
OpenTelemetry · Prometheus ·
Grafana · GitHub Actions · CI/CD ·
Serverless · Observability

Cloud

GCP · AWS

SUMMARY

Senior Full-Stack Software Engineer with **over 11 years** of experience building web products across **frontend, backend, and the broader delivery lifecycle**.

I enjoy turning product requirements into reliable software and working across the stack to solve problems and get features into production. My work has included **JavaScript/TypeScript, Node.js, React, Next.js, Go, GraphQL, MongoDB, PostgreSQL, AWS, and GCP**.

Over the years, I've also worked on architecture, infrastructure, security, and developer experience, but these days I'm most interested in building useful features, improving product workflows, and shipping high-quality software.

Currently working remotely as a **Senior Software Engineer** at **Niche.com**, a leading **Edtech** platform for college and K-12 school search and discovery, where I contribute to platform architecture, accessibility, and full-stack product development.

EXPERIENCE

Niche

Remote

Senior Software Engineer

10/2025 - Present

- Served as a key engineering contributor during a **3-month accessibility compliance audit** led by **Allyant**, helping bring the platform into compliance.
- Contributed to the **migration of a critical registration flow** for a key user segment, helping ensure a smooth transition with minimal disruption to production.
- Owned the architecture and implementation of **Orchestrator**, a graph-based workflow engine that helped product teams build and ship declarative form flows with shared routing, skip logic, and UI state.
- Delivered the first version of the **College Quiz** flow ahead of schedule as part of a cross-functional team, using Orchestrator to accelerate feature delivery and reduce coordination overhead.

INTERESTS

Information systems

I'm passionate about complex information systems—understanding how they operate, communicate, share data, and remain secure and high-performing.

Finance and Banking

I have a strong interest in the inner workings of the financial system. I'm curious about how transactional services interconnect, support large-scale operations, and influence everyday life.

EXPERIENCE

Jobbatical

Senior Software Engineer

Remote

09/2020 - 10/2025

- Developed and maintained product features for the Jobbatical **SaaS** platform using **JavaScript/TypeScript, Go, React, Next.js, GraphQL, Express.js, and MongoDB**.
- Designed and developed an automation system for recurring platform tasks, helping users complete routine work more efficiently.
- Led the migration of infrastructure operations from manual patching and updates to **fully automated infrastructure** using **Terraform, Kubernetes, Go, and GCP**.
- Conduct quarterly vulnerability assessments to ensure compliance with current security standards and maintain up-to-date risk awareness.
- Automated integrations between **GCP infrastructure** and third-party services including **Cloudflare** and **MongoDB Atlas**.
- Led the migration of legacy systems to modern technologies using **JavaScript, Node.js, Go, and GCP**, improving maintainability and developer experience.
- Improved **CI/CD** processes using **Docker, GitHub Actions, and GCP** technologies, reducing deployment times by around **30% - 50%**, facilitating consistent, daily production updates.
- Migrated legacy **cron job** systems to a **serverless architecture**, improving maintainability, visibility, and operational reliability for recurring product workflows.

Globant

Senior Nodejs Developer

Medellín, Colombia

04/2019 - 09/2020

- Contributed to engineering projects for two major clients: **National Geographic** and **Disney**.
- **National Geographic (Client):**
- Built a **GDPR-compliant** system to automate user data deletion requests using **React.js** on the frontend and a **serverless Node.js architecture on AWS** on the backend.
- Maintained the backend APIs powering the **National Geographic mobile application**.
- **Disney (Client):**
- Contributed to a scalable metadata platform supporting the **Disney+** streaming service, helping manage content data for global distribution using **Node.js** and **Kafka**.

Condor Labs

Software Engineer

Cartagena, Colombia

06/2016 - 03/2019

- Migrated a legacy platform used to manage compliance status for U.S. health professionals from **C#/.NET/Windows Server/Oracle** to a modern stack based on **React, Node.js, MongoDB, Elasticsearch, and AWS**, improving performance, deployment, and maintainability.
- Developed a **SaaS platform** for health professionals in the U.S. to complete required courses and stay compliant with industry regulations.
- Led the **R&D team** in evaluating technologies such as **Go, Prometheus, Grafana, and the TICK Stack** to improve platform performance, monitoring, and reliability.

EXPERIENCE

Transportes Luz SAS

Monteria, Colombia

Software Developer

01/2014 - 12/2015

- Designed, developed, and maintained the company's core operational desktop software using **C#, .NET, WPF, and MySQL**.
- Supported the company's logistics and operations for more than **5 years** through a core internal system that remained in use until it was later replaced.

EDUCATION

University of Cordoba

Monteria, Colombia

Bachelor's Degree in Software Engineering and Telecommunications

01/2010 - 12/2015
